

FIRST RESPONDER INITIAL CERTIFICATION/LICENSURE OR RE-LICENSING PRACTICAL EVALUATION

3.23 Unconscious Medical

Key Performance Outcomes

- Manage an unconscious medical patient

Patient Instructions

C/C:	Unconscious
HxC/C:	While "standing at attention" for an extended period of time, you fainted and slumped to the grass.
Pain Assessment (PQRST)	N/A
Relevant symptoms:	Sweaty
Relevant past Med Hx:	High blood pressure
Medications:	Vasotec
Allergies:	Shellfish
Other:	<p>You are an RCMP member who is in an honour guard for a foreign dignitary visit.</p> <p>Once the attendant rolls you 3/4 prone you can start to "come around" - you can answer the history questions. If the attendant does not roll you 3/4 prone then approximately 2 minutes into the simulation you can start to "come around"</p> <p>You are portraying a 50 year old patient.</p>

Scenario Information

Dispatch Information

Dispatched to a local park for an unconscious collapse. Dispatch informs you that you are to meet the RCMP at the park entrance - apparently there is a VIP in town and they are in charge of the event that is taking place.

Scene Information

It is a warm summer day. As you approach the park you are flagged down by a RCMP member. She informs you that one of the RCMP members who is part of the honor guard fainted. As you approach the patient you notice the RCMP have coned off the patient from the audience. You see a RCMP member in his red dress uniform lying supine on the grass. Two other members are trying to provide shade for him.

Witnessed or Secondary Information (as required)

Criteria	Relevant findings		Required actions	
RSE	Safe			
LOC	Unconscious AV		PU	
D	None		Determine mechanism of injury and rule out spinal injury	
A	Clear and open		Patient will reject an OPA if attempted	
B	Present and adequate			
C	Radial pulse rapid and weak			
RBS	No injuries found			
Critical Interventions	Manage an unconscious patient		Roll 3/4 prone, oxygen therapy,	
C/C	Unconscious - moans to painful stimuli			
HX C/C	While "standing at attention" for an extended period of time, the patient apparently fainted and slumped to the grass.			
Med Hx	High blood pressure			
Medication	Vasotec			
Allergies	Shellfish			
Vital Signs	Initial Set		Second Set (if applicable)	
	LOC	Unconscious	LOC	Confused
	PULSE	110 weak and regular	PULSE	80 regular
	RESP	20 regular	RESP	16 regular
	SKIN	Pale, clammy	SKIN	Normal
Other/Misc.	Note: Once the attendant rolls the patient 3/4 prone the patient can start to "come around" and can answer the history questions. If the attendant does not roll the patient 3/4 prone then approximately 2 minutes into the simulation the patient should start to "come around"		Modify which set of vital signs you give, depending on how quickly the attendant gets to assessing vital signs
